

**IN CASE
YOU DIDN'T
KNOW**

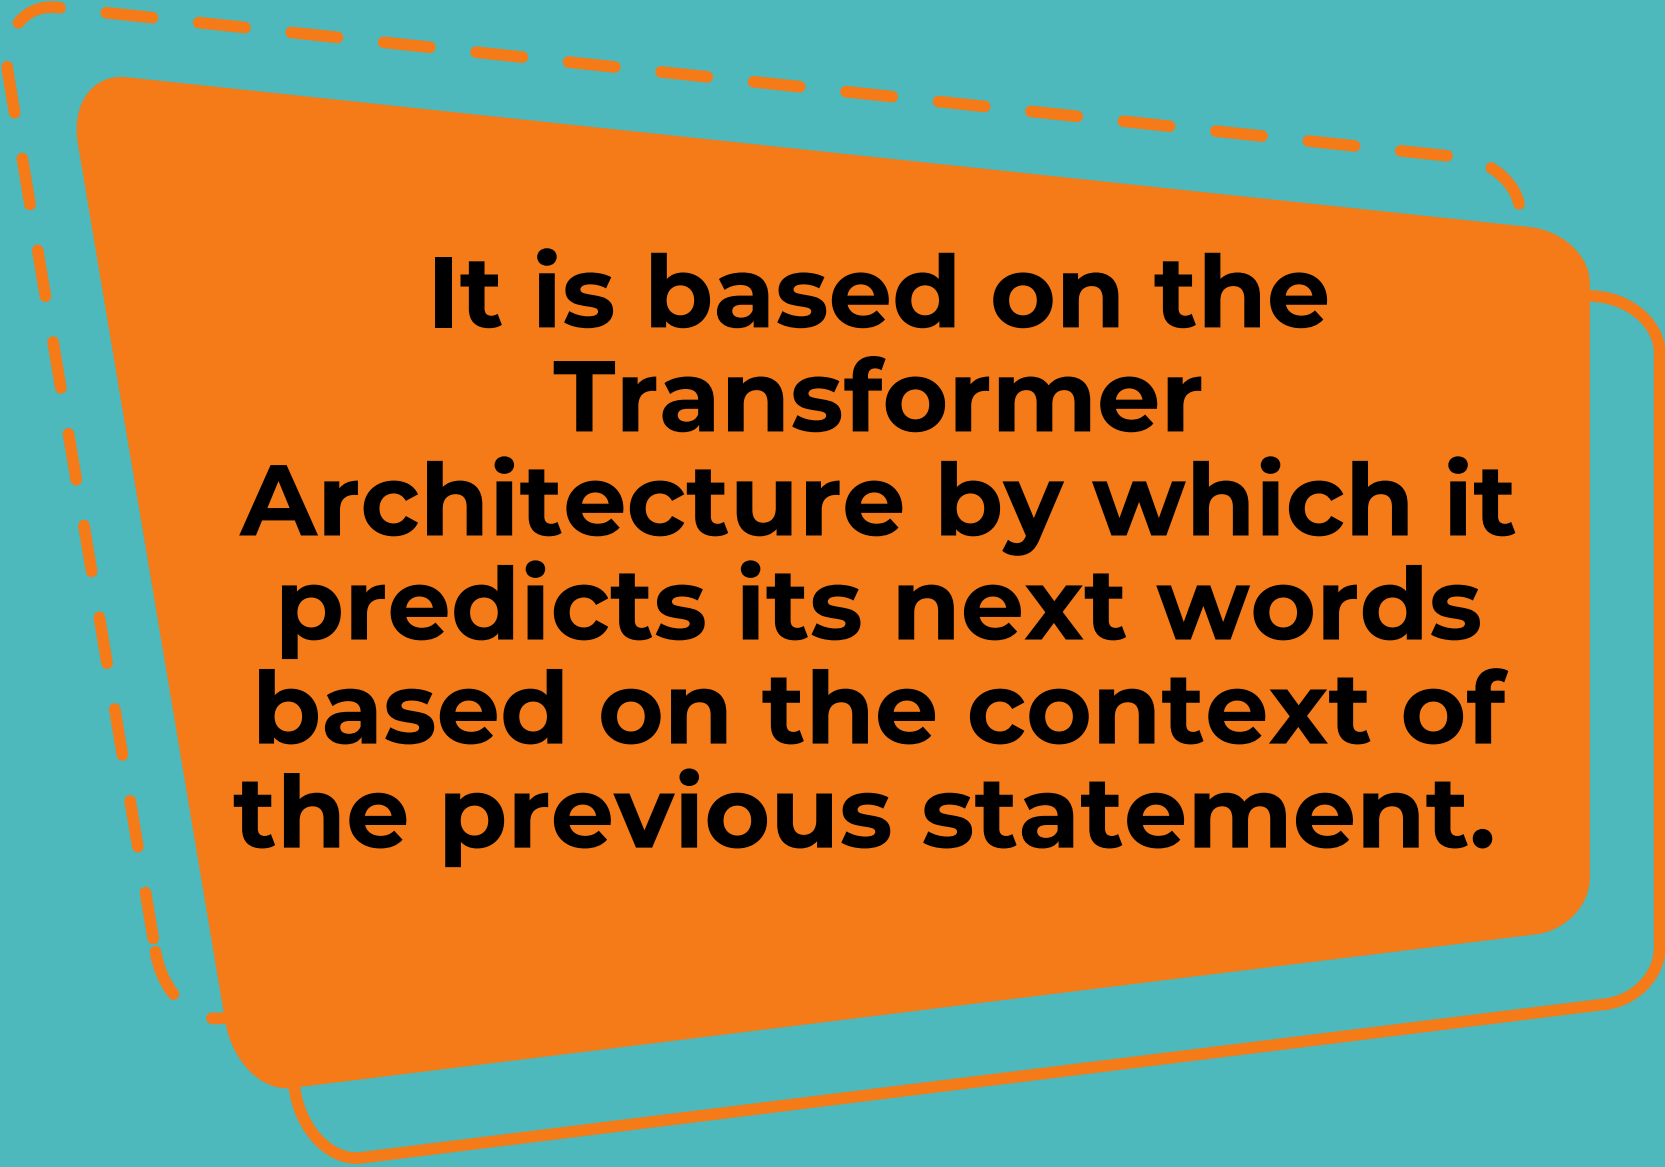

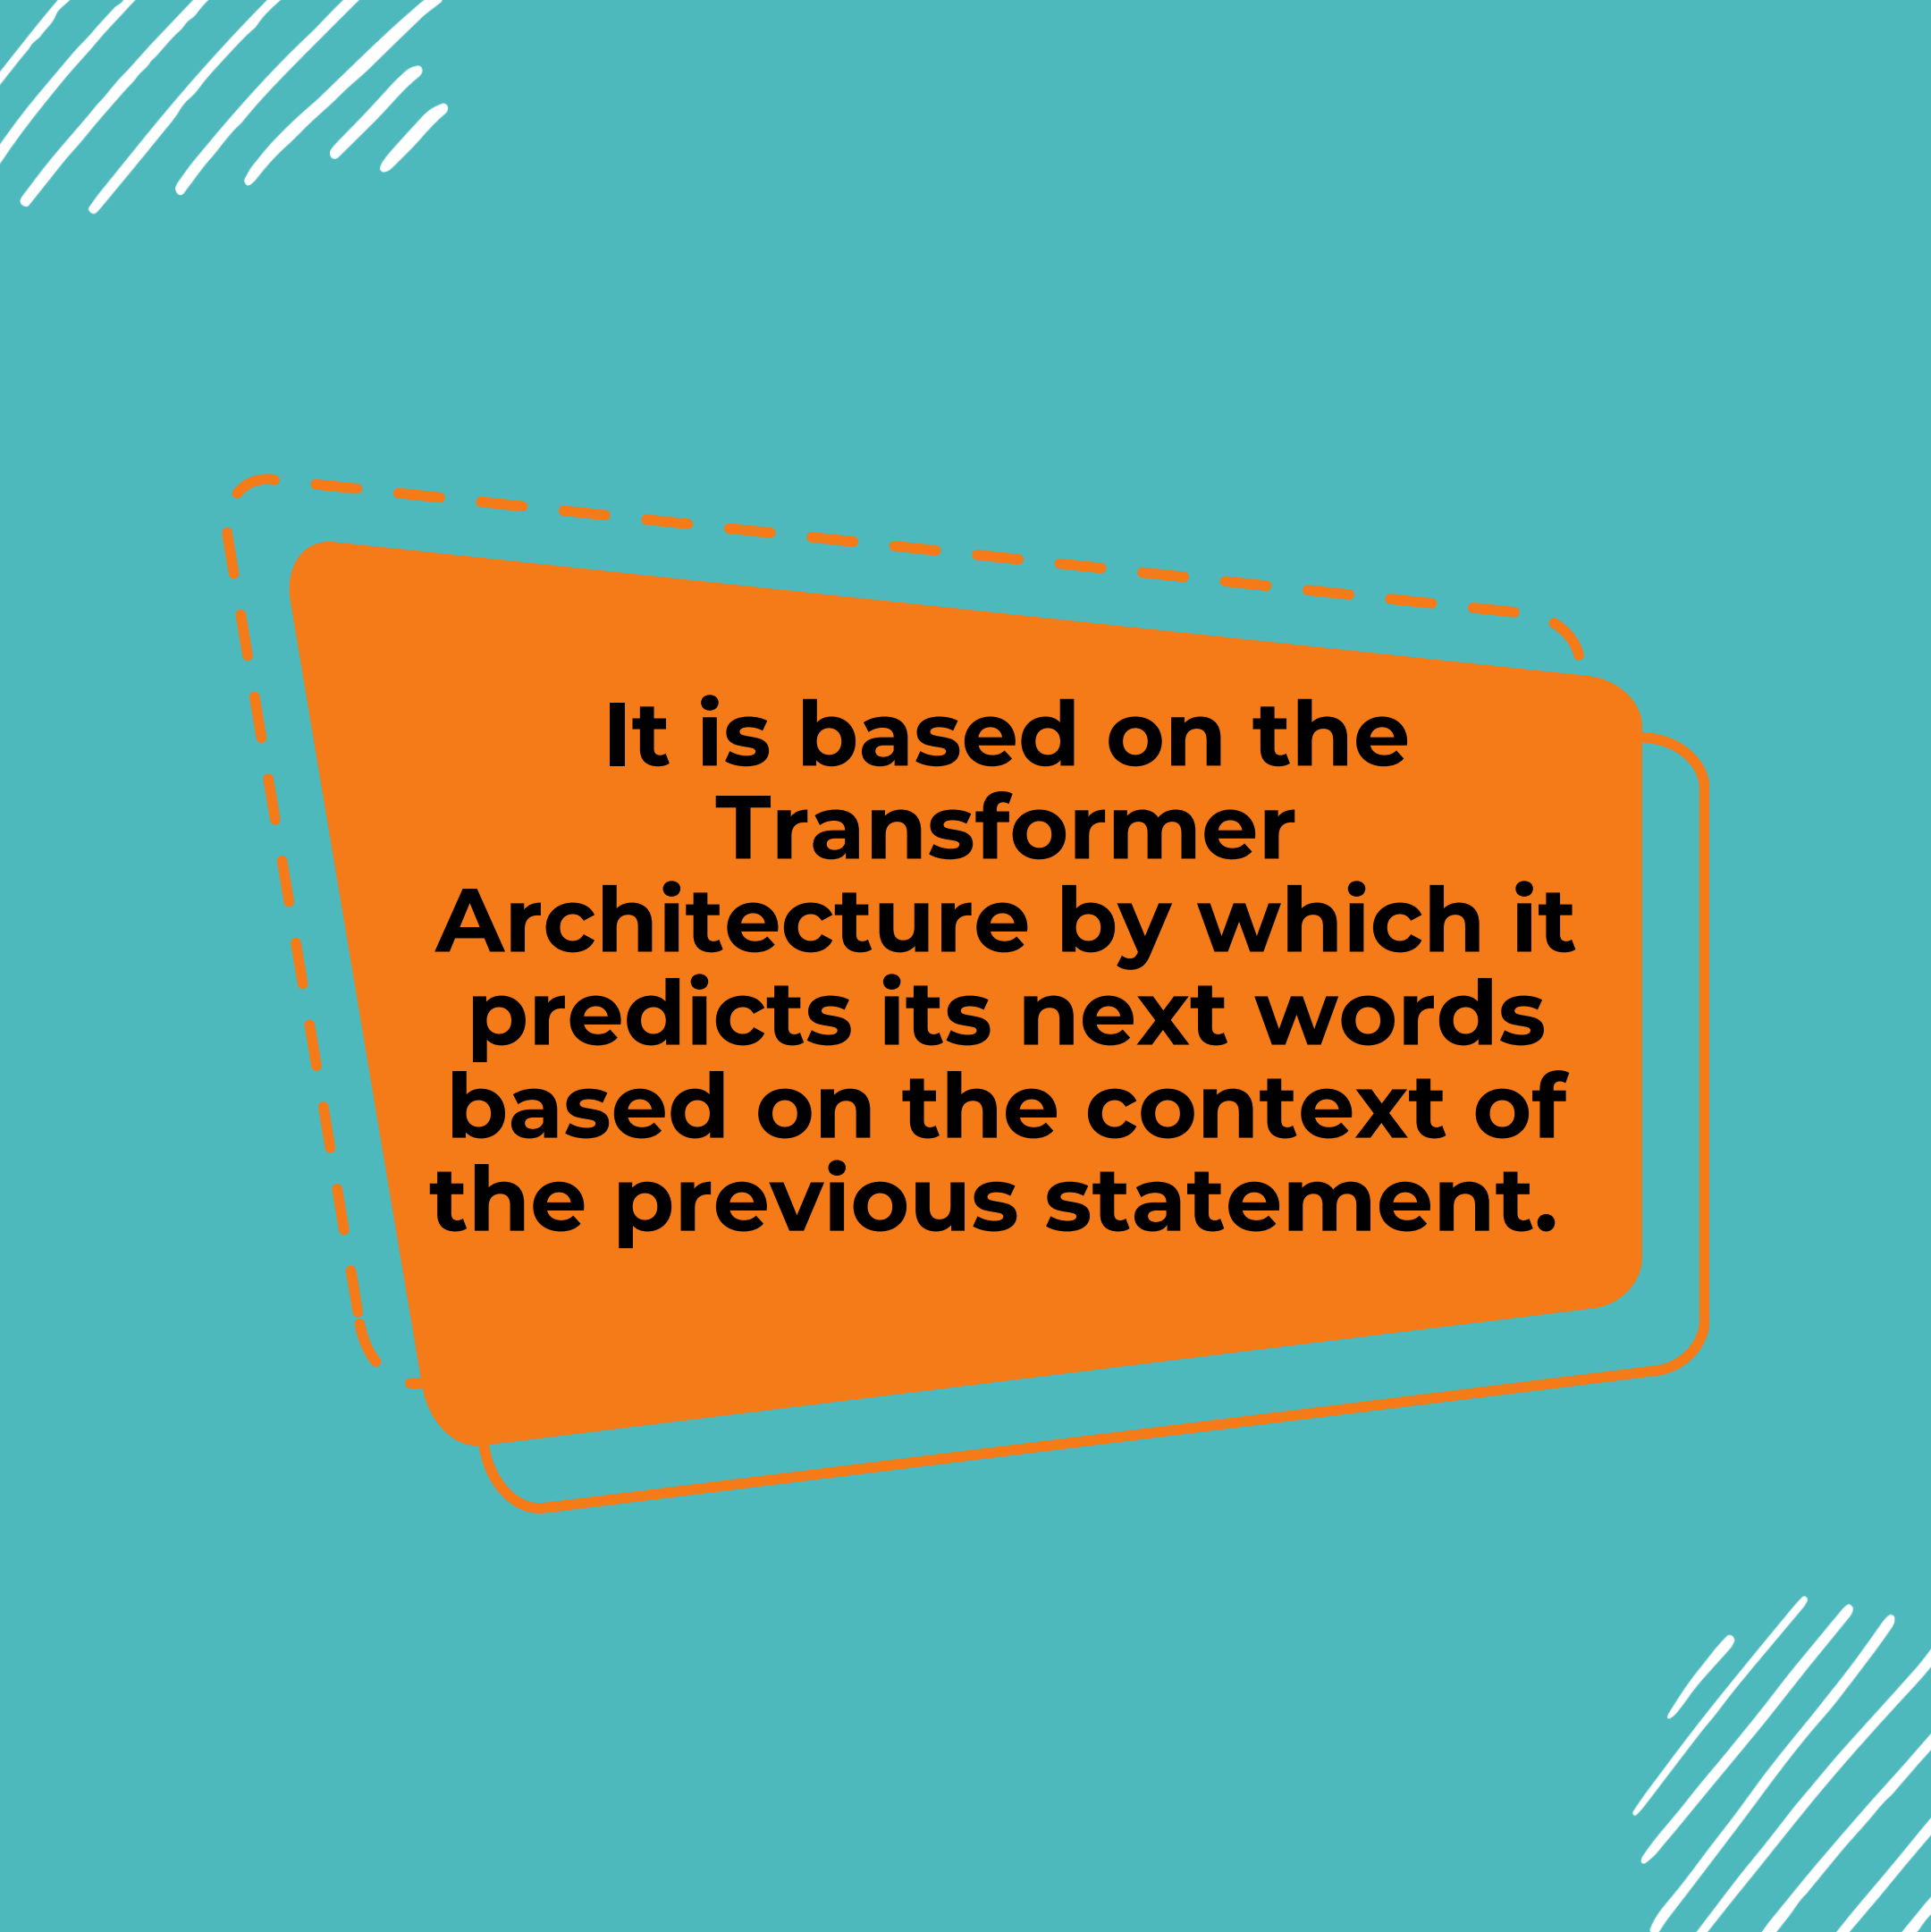

**HOW DOES
CHAT-GPT
WORK?**

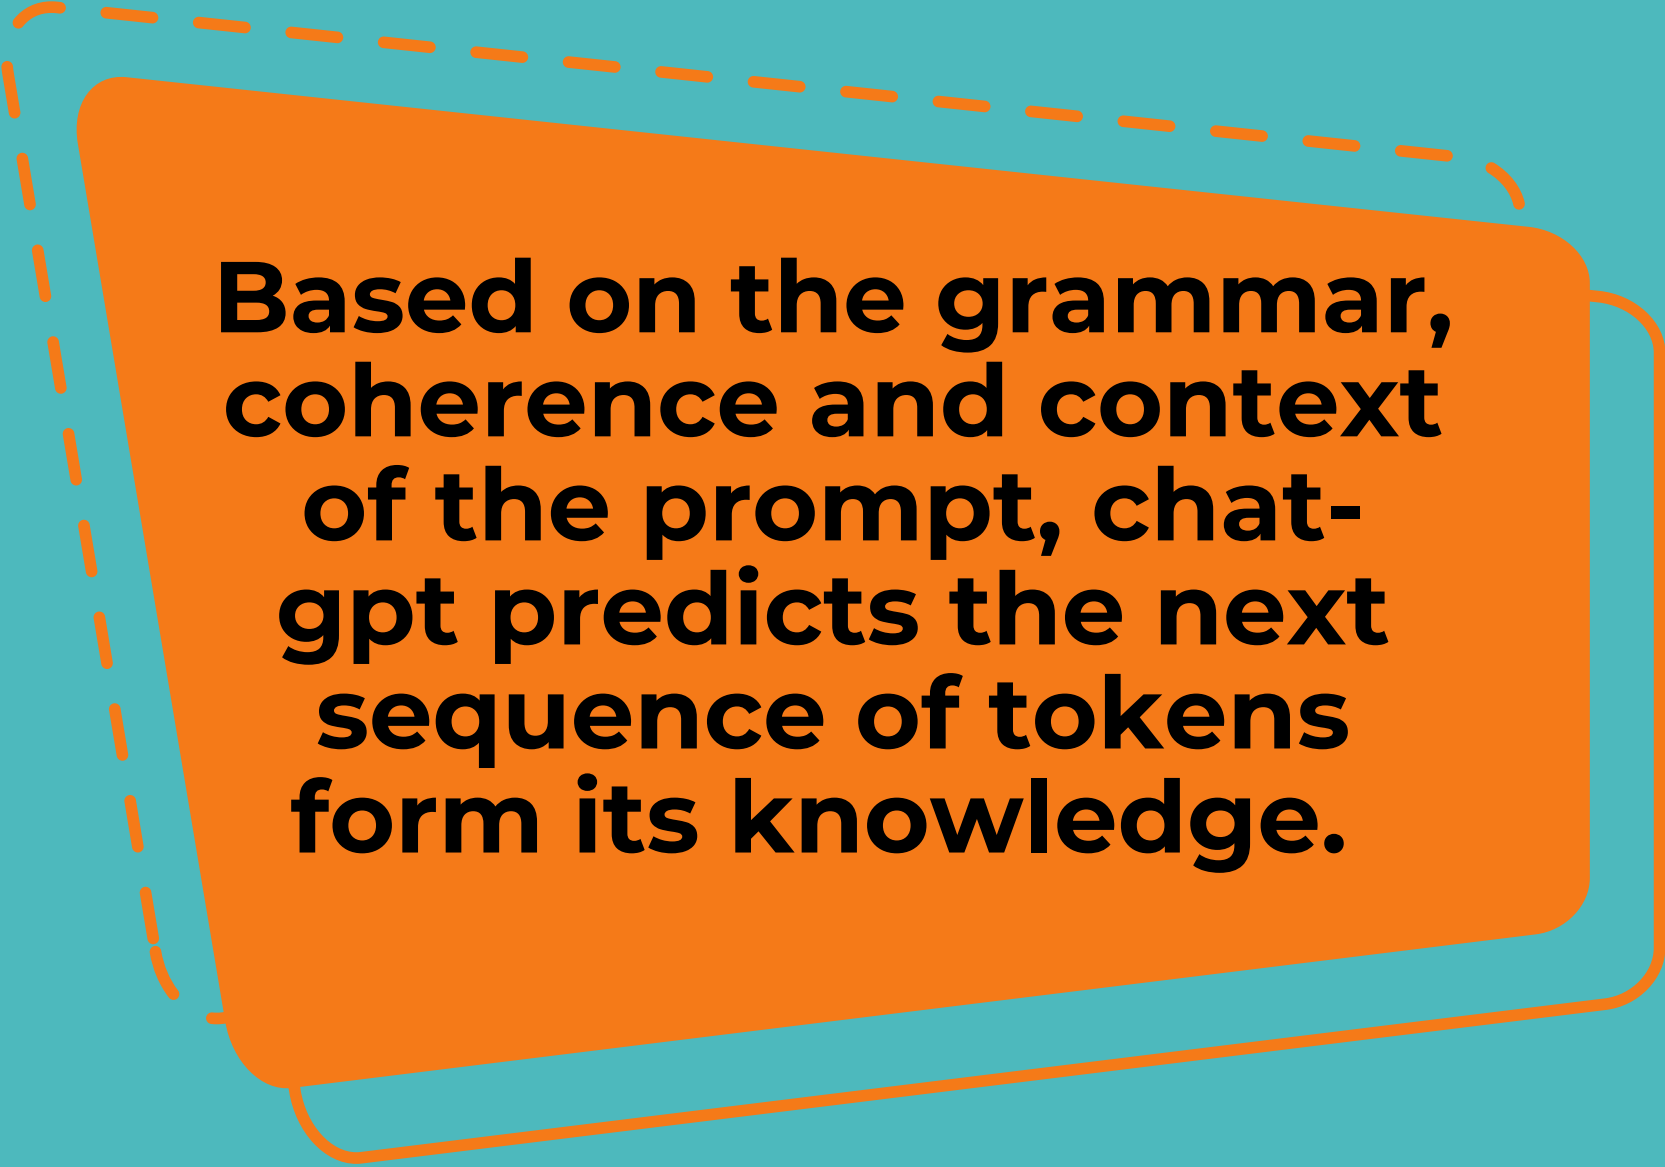

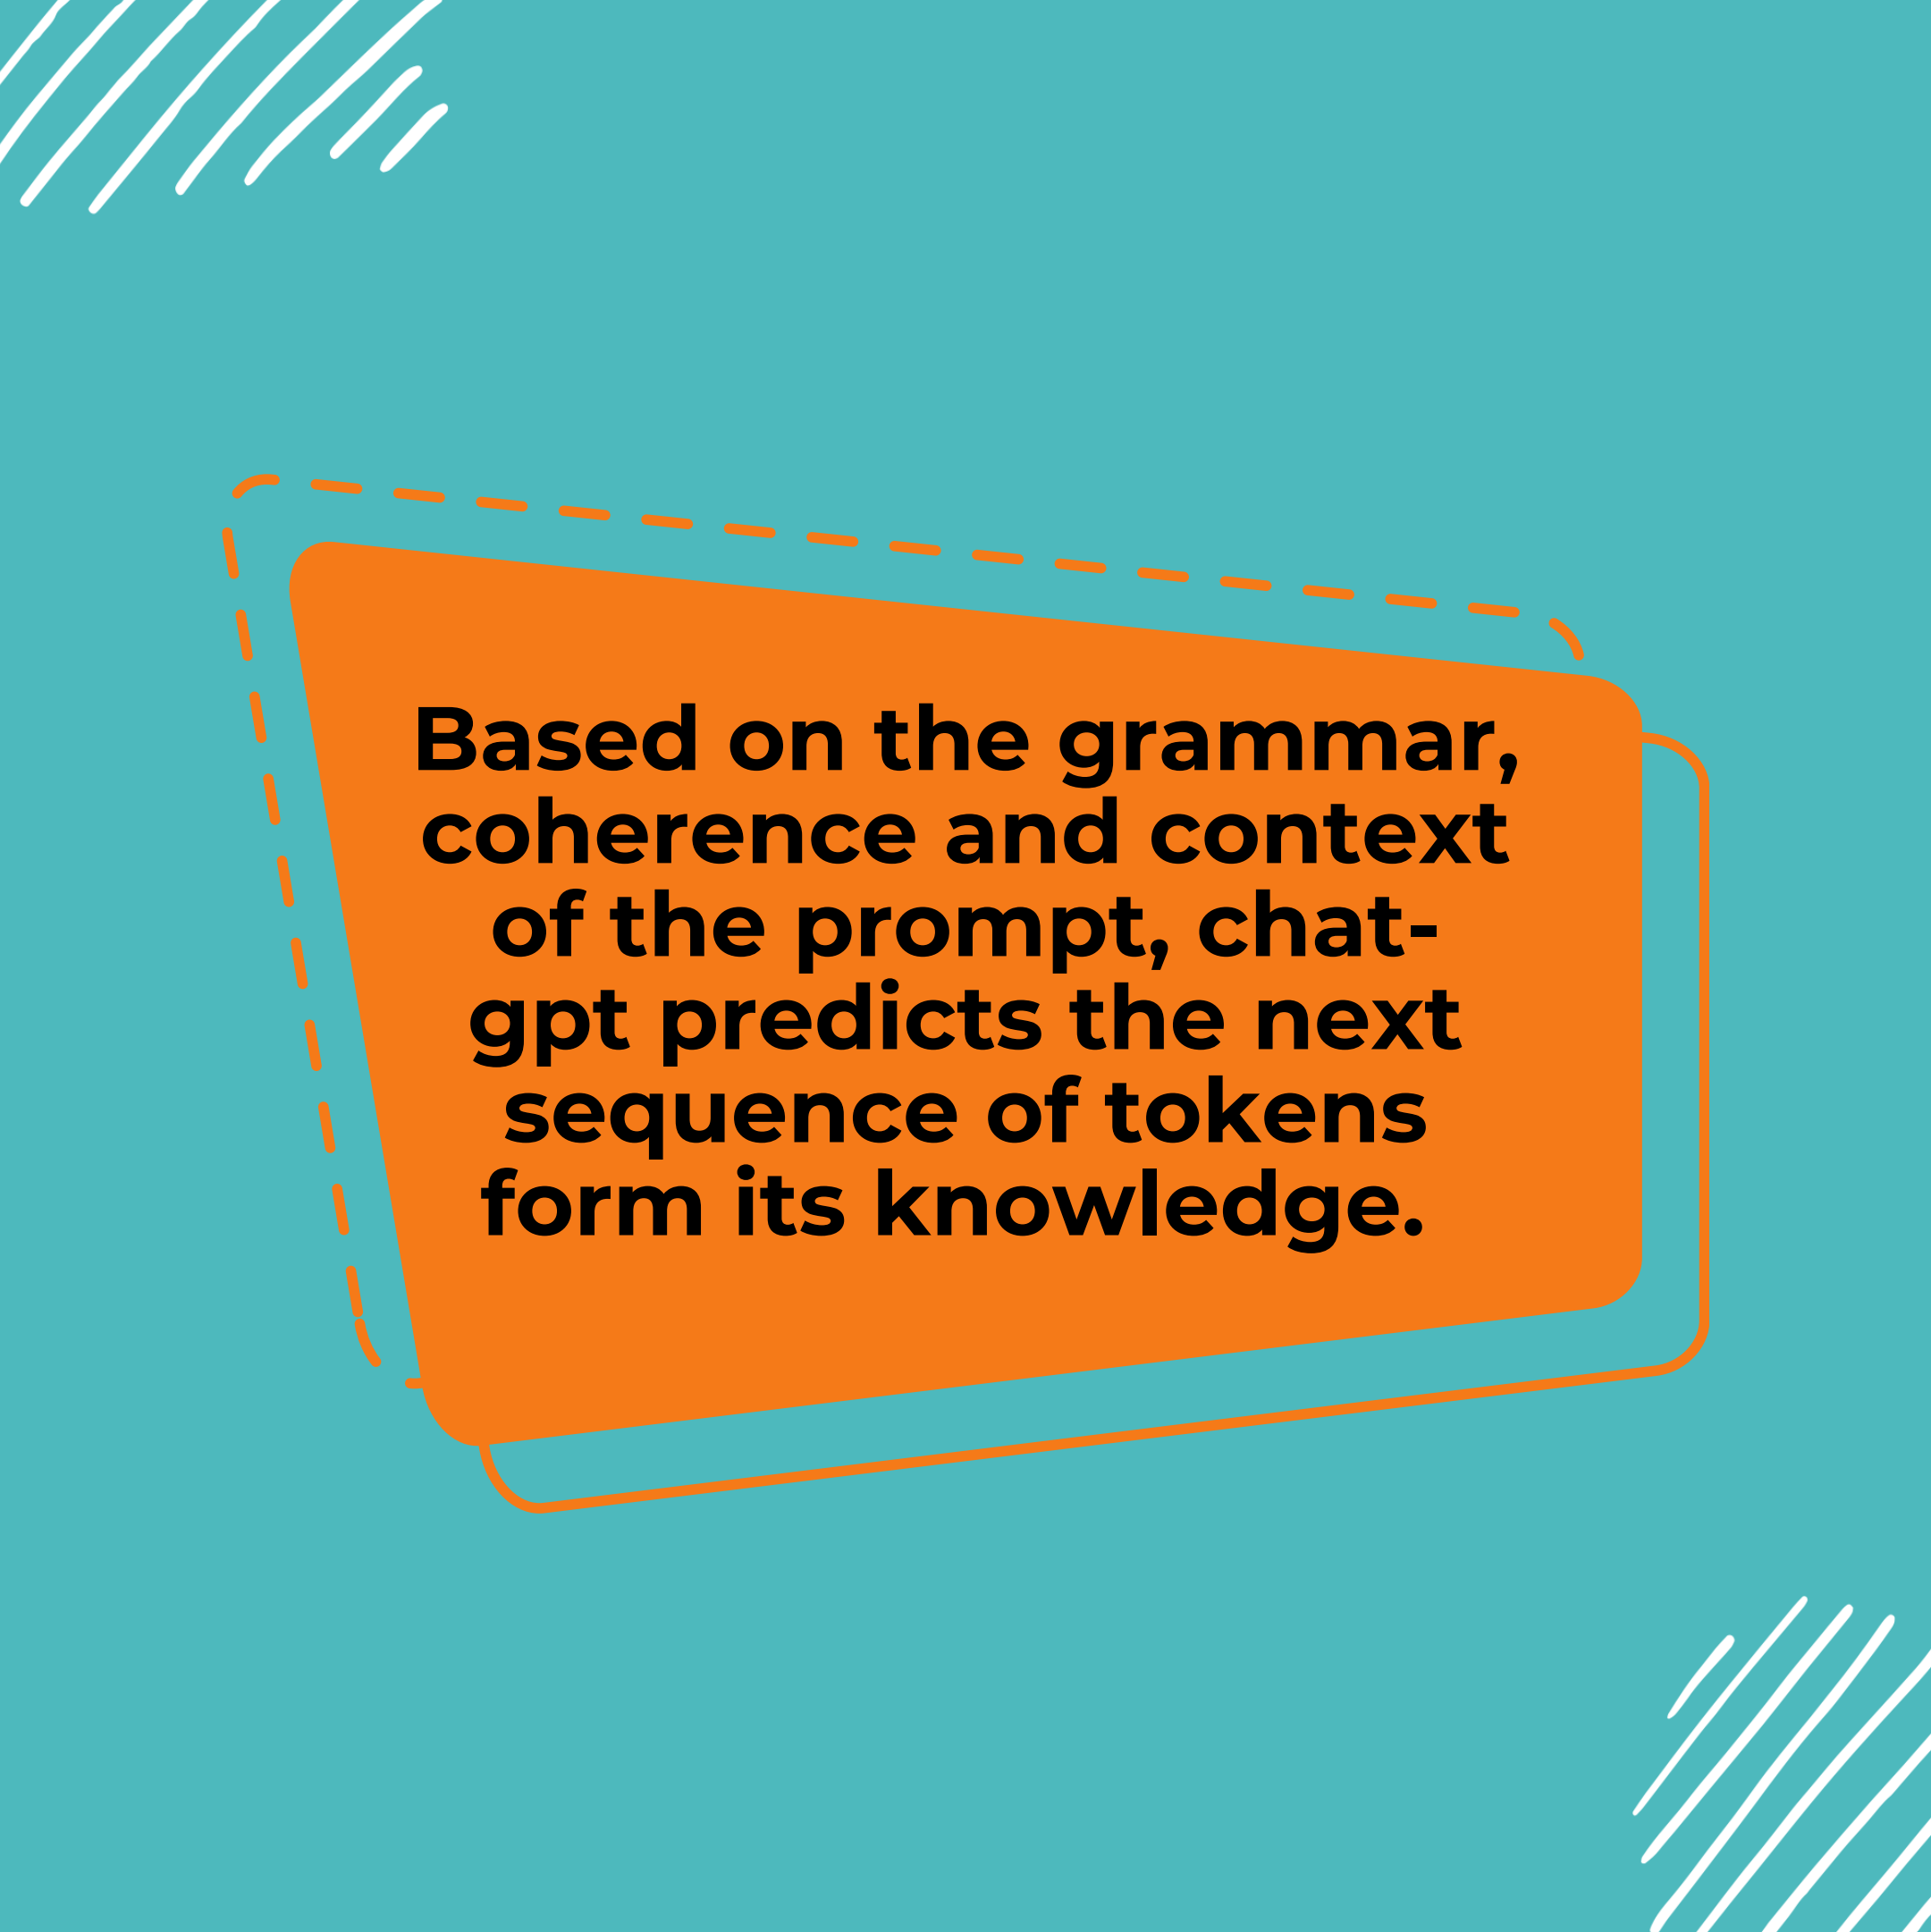

**ChatGPT is trained on a
vast dataset of text
available on the
internet, books and
other articles up until
September 2021**

**It is based on the
Transformer
Architecture by which it
predicts its next words
based on the context of
the previous statement.**

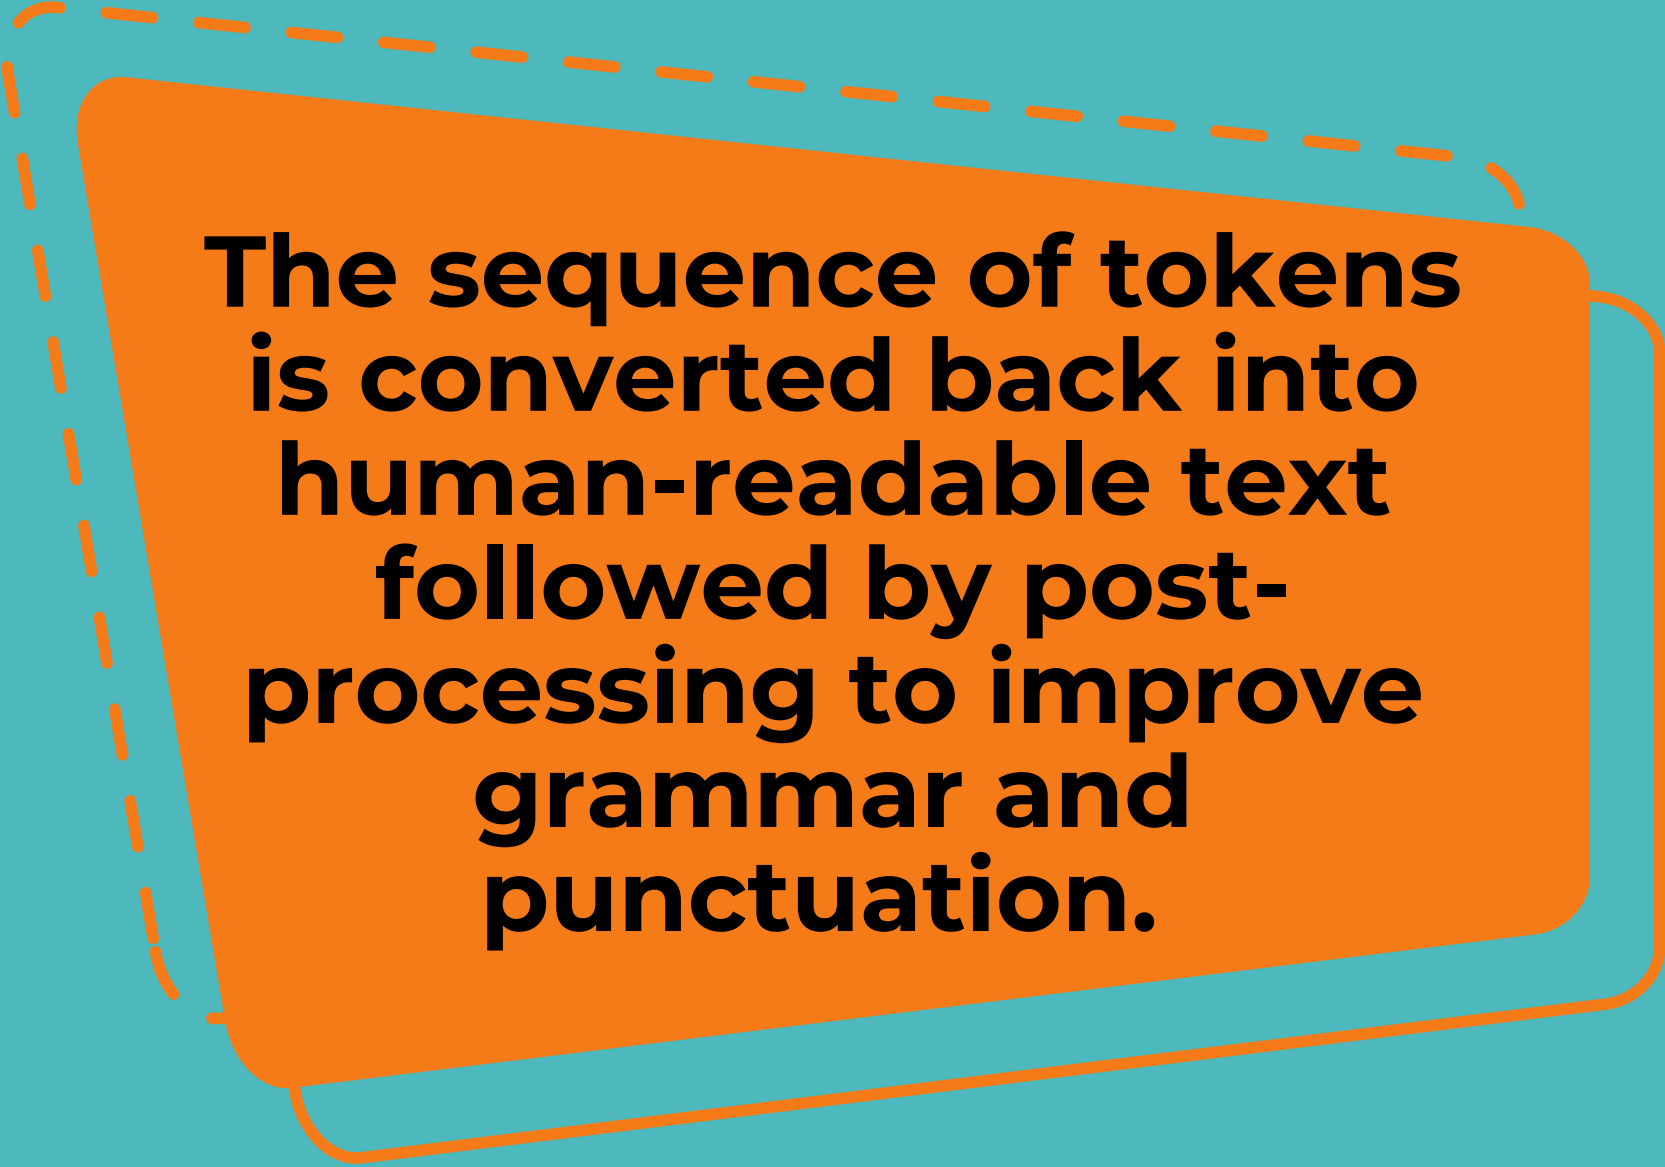

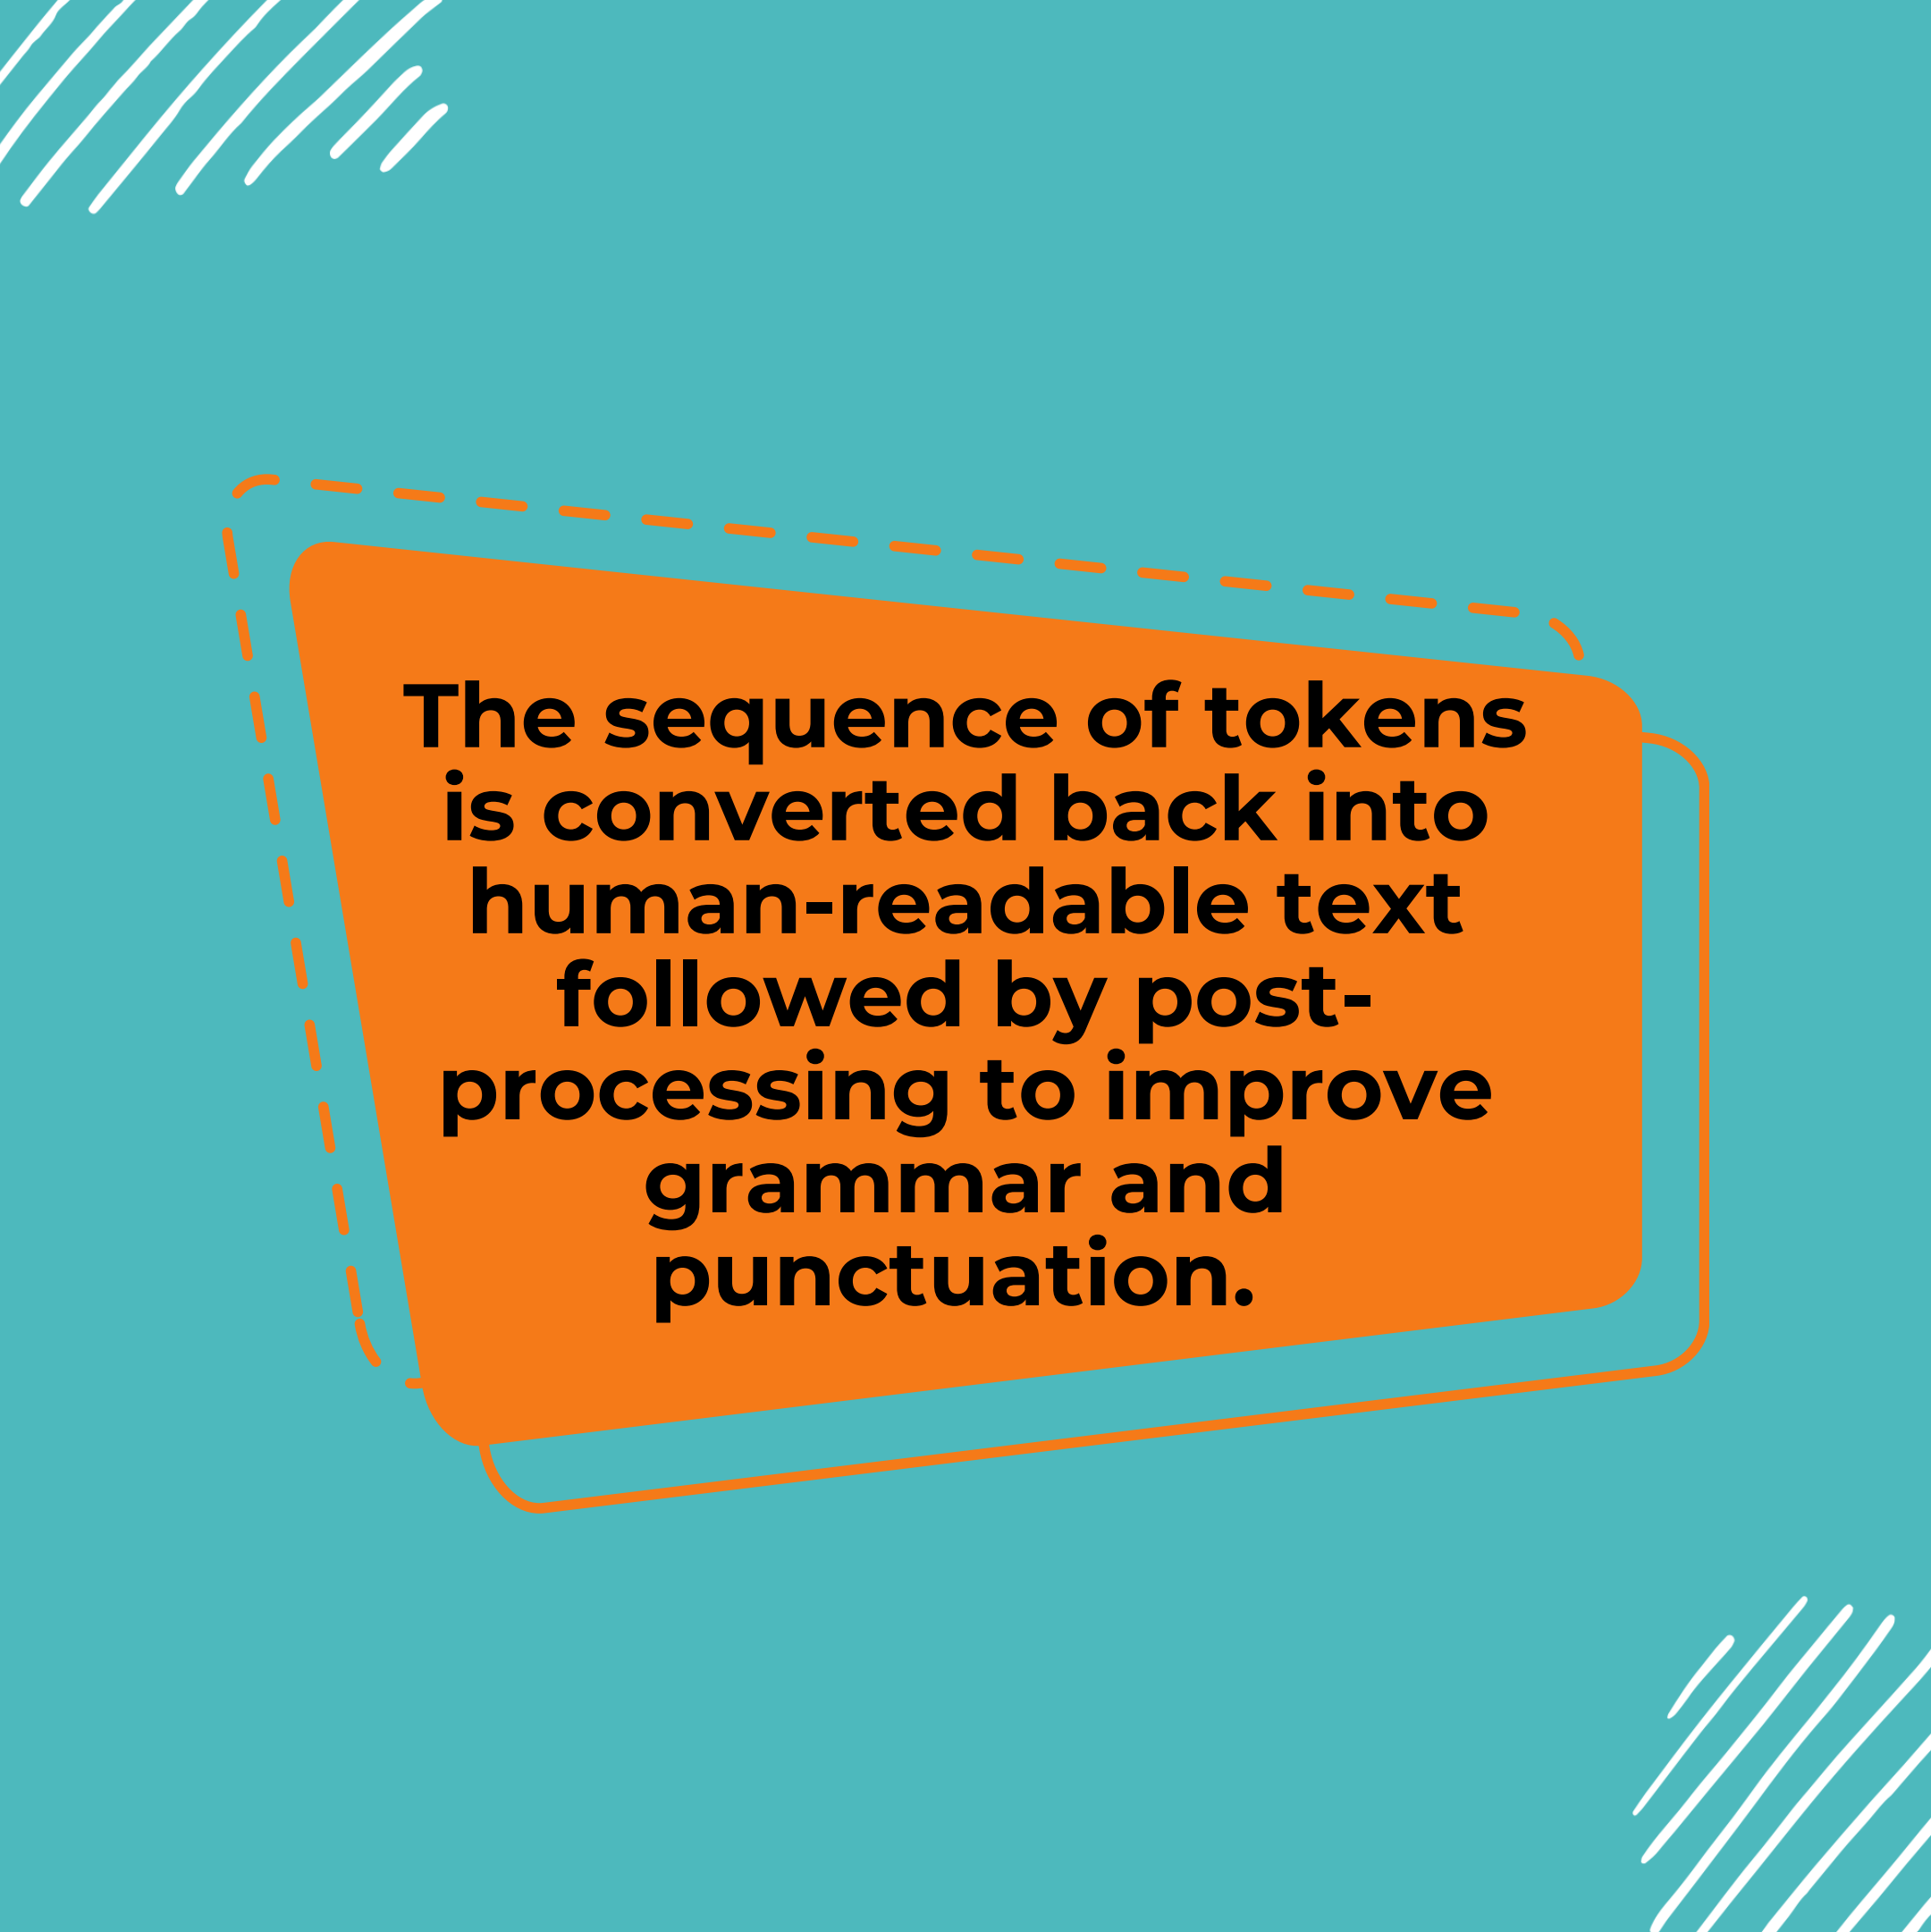

**The prompt provided
by us is then converted
into a tokenized
language for chat-gpt
to comprehend**

**Based on the grammar,
coherence and context
of the prompt, chat-
gpt predicts the next
sequence of tokens
from its knowledge.**

**The individual tokens
are generated by
balancing the
randomness and
coherence of the output
to produce a suitable
final response.**

**The sequence of tokens
is converted back into
human-readable text
followed by post-
processing to improve
grammar and
punctuation.**
